A Perfect Connection Every Time

Installation Procedure

1 Insert tube into the fittings fully and then finger-tighten the nut.

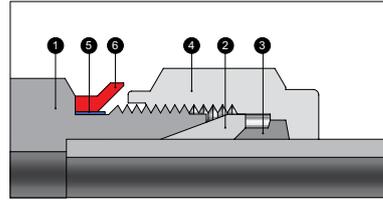

2 Tighten with appropriate tools until check ring comes off.

VIS-LOK Advantages

- » Quick installation
- » Assurance at every connection
- » No inspection gauge or markers required
- » Easy and assured installation even for non-experienced installers
- » Eliminate over and under tightening issues
- » No more guess work, leaking systems, downtime, and costly repairs

Tube working pressure (psi)

Allowable stress value between -200F and 1000F (-28.90C ~ 37.80C) is 19,500 psi safety factor is 4 (Ultimate tensile strength is 70,000 psi)

- » The above data is based on the minimum wall thickness and the maximum O.D. allowed under the standard of ASTM A269.
- » The dimensions do not allow for erosion or corrosion.

Technical Information

Compatibility

VIS-LOK tube fittings are designed and manufactured to be interchangeable with other tube fittings manufactured by other industry leading manufacturers. When required compatibility testing can be performed by an independent third party and the reports can be provided.

Hardness Limitation

High quality stainless steel tubing that is fully annealed; Seamless or Welded per ASTM A269, A213 or equivalent should be used with VIS-LOK tube fittings. The tubing must not exceed a maximum hardness of HRB 90 on the Rockwell Scale. HRB 80 is more suitable for bending and offers a greater difference in hardness to the ferrules. This difference in hardness offers more ease in assembly and better interaction between the ferrules and the tubing.

Vacuum, Cryogenic and High Temperature Applications

VIS-LOK fittings have been tested in vacuum, cryogenic and high temperatures insuring repeatable and reliable performance in the severest of applications.

Gas System Applications

VIS-LOK tube fittings are appropriate for gas systems.

For All Applications

Tubing hardness must be less than that of the ferrules.

Tubing should be free of surface imperfections, defects and round in shape.

Select appropriate wall thickness.

Tubing ends must be cut squarely and perpendicular to the center-line of the tubing. After the tubing is cut it must be deburred on both the inside and outside with a high quality fully sharpened deburring tool.

Follow the VIS-LOK installation instructions.

Do not attempt to bend the tubing after a fitting has been installed in a fixed position.

Tubing systems should be installed to allow for adequate expansion and contraction as well as ease of maintenance.

VIS-LOK Warranty

VIS-LOK tube fittings shall be free from defects in material and workmanship for the life time of the product.

The purchaser's solutions shall be limited to replacement of any parts that fail through a defect in material or workmanship.

Bored-Through Fittings for Thermocouples

VIS-LOK Bored-Through MALE CONNECTORS accommodate thermocouples or dip tubes.

Note - The root diameter of the pipe thread end of male connectors makes it impractical to bore through all male connectors.

***ALLOW CLEARANCE FOR FULL THREAD**

Installation Instruction

In order to prevent the leakage with VIS-LOK O-Seal Fittings, the surface perpendicular to the axis of the thread should be flat. When installing an O-Seal fitting, turn it until finger-tight. (The squeeze on O-Ring can be felt during the last 1/4 turn). After finger-tight installation, snug lightly with a wrench.

When connecting the tubing to the VIS-LOK connector, always use a back-up wrench on the O-Seal fitting hex so it does not turn while the nut is being tightened. Also use a back-up wrench when disconnecting a tubing connection.

For a raised surface, such as Figure 1, it is recommended that the flat surface have a diameter at least as large as dimension "A" for the various size O-Seal fittings. This diameter is sufficient to allow metal-to-metal contact outside of the O-Ring sealing diameter and to prevent O-Ring extrusion at high pressure.

Figure 2 is an O-Seal fitting using with a counter bored or recessed hole. In this case, the diameter "B" is sufficient to allow the round shoulder of the O-seal to clear for proper installation. "D" gives the maximum depth that can be used with this diameter.

Figure 3 shows the usage at deeper grooved or concaved area and "E" is the maximum depth that will allow a thin wrench (1/8") to hold the O-Seal fitting while the VIS-LOK connection is made to the tubing. The diameter "C" is sufficient to allow the hex of the fitting to turn in the recessed hole.

Knowledge, experience and innovation is the foundation of the Waterworks team, with more than 125 years combined industry expertise.

Graeme Thomas started providing precision engineering services for local processing plants in 1980. He formed a reputation for reliability and was known for finding a working solution to any issue. A decade later, with sons Gary and Daniel having joined the force, they were now also supplying and installing pump and pipeline solutions.

In 2005 Waterworks Wholesale emerged, importing and distributing agricultural piping systems nationwide. The range grew over time with the popular addition of industrial systems such as Europress press-fit and Spears sch80 PVC.

Today Waterworks includes three generations and combines experience from 38 years in the game with modern and innovative processes. As a family company, we bring an extra level of passion to everything we do. We not only supply reliable piping systems, but we also provide you with a greater experience designed to increase your productivity.

We know what works and what doesn't.
