

Emerson's Brewery

- Location:** Emerson's Brewery Dunedin
Product Used: Europress Stainless Steel Press Fit Pipe System
Application: General services for new brewery
Pipe Sizes: ½" (15mm) through to 4" (108mm) Stainless Steel

Farra Stainless, a Dunedin based engineering company, recently completed the installation of the brewing plant in the new Emerson's Brewery in Dunedin. Farra opted to use Europress for the services throughout the Brewery alongside the welded stainless which was used for the beer and process lines. Europress was used for a high pressure CO2 gas line from the CO2 tank to the services, running at 7 bar, compressed air running at around 8 bar, and glycol pipework at -2°C with a standard operating pressure of 2.5 bar but was tested up to 13 bar. Given the range of applications on this project, tube sizes used range from 15mm through to 108mm.

One key deciding factor for Farra was the incredible speed and ease of installation that Europress offers which allowed them to complete the project on time and to a very high standard of workmanship.

Project Manager Rhys Genever said "it was very easy to install. We had well over 2500m of pipe to install and even if we had all the welders down there it wouldn't have happened."

Waterworks Wholesale's dedication to service once again shone in this project with goods being delivered on time as promised. Also with communication between supplier and installer being an important factor on a project such as this, Waterworks goes the extra mile to ensure there is clear communication regarding product specifications, despatch, and delivery. Rhys said "you were easy to deal with, if something needed to be done you would go away and sort it and ring back. When the goods arrived it was a race for the courier bag to get the lollies."
