

Grey Base Hospital

Location: Water Walk Road, Greymouth
Product Used: Europress Stainless Steel Press Fit Pipe System
Application: Mechanical heating and cooling services
Pipe Sizes: ½" (15mm) through to 2" (54mm) Stainless Steel

Over the past two years, we have been working with the team from David Browne Contractors at the new Grey Base Hospital in Greymouth. The 8500 square meter facility includes 56 in-patient beds, three operating theatres, and an integrated family health centre to support the delivery of primary healthcare services. It will also house and support the delivery of other clinical services, including a 24/7 emergency department, critical care unit, acute and planned medical and surgical services, maternity services, and outpatient care.

Europress Press-fit System was the preferred option and has been used for mechanical heating and cooling services throughout the facility with close to 4000 meters of Europress being installed.

All sizes from 15 to 54mm were used, plus 108mm in the Wastewater pump station. 304 grade tube has been used for the mechanical services while 316L was used for any potable water applications. Waterworks worked closely with the team from David Browne

Contractors assisting them with our advanced quality control process, which included regular site visits and assisting with project documentation.

"Europress was selected for its durability, longevity, installation timelines and cost savings on labour and materials."

"Waterworks were excellent to work with and would highly recommend them."

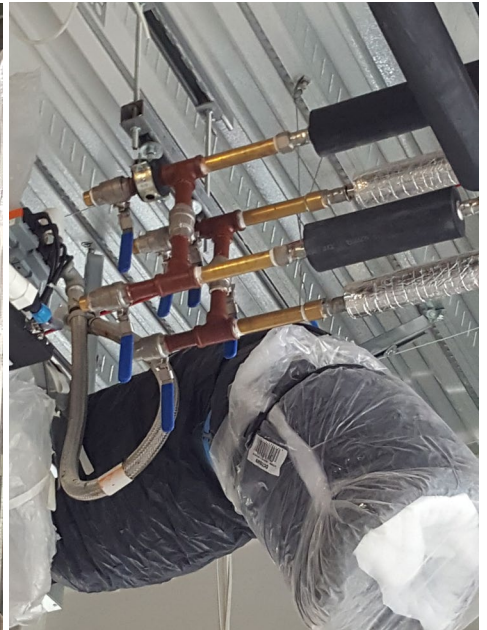

I want to say thank you to the team at David Browne's and in particular Bobby and Craig, and their team here at Grey Base. Thank you for choosing Europress and Waterworks. It has been a pleasure to partner with you and deliver another successful Europress project.
