

Irrigation Project

Product Used: Europress Stainless Steel Press Fit Pipe System
Application: Pilot water for the main and bypass diaphragm control valves
Pipe Sizes: 15mm, 42mm, and 54mm Stainless Steel

.....

Europress was recently installed on a major irrigation project for the command water system controlling two large diaphragm control valves. The main valve was a 900mm diaphragm valve weighing 1700kg and the bypass was a 350mm diaphragm valve. The command system controlled the valves, opening and closing the diaphragms according to demand from participating irrigation schemes. During peak demand times the large valve would open and during low demand times it would shut off and the bypass valve would open.

Working outdoors in damp, and at times cold, conditions the installers found Europress a very quick and easy system to work with. A great combination of fittings are available making almost any situation possible and being a modular system you can dry fit a lot of pipework and then simply crimp it once in the correct position. The installer said they would gladly use Europress again as it went very well for them.
