

## The Smiths Snackfood Co Limited

**Location:** Adelaide  
**Installer:** EHL Group  
**Product Used:** Europress Stainless Steel Press Fit Pipe System  
**Application:** Compressed Air  
**Pipe Sizes:** 76, 54, 42, 35mm

EHL Group recently completed the installation of a nitrogen plant at The Smiths Snackfood (a PepsiCo company) potato chip factory in Adelaide, using Europress stainless steel for the compressed air pipework. Liam O'Neill, EHL Project & Design Engineer, provided the following feedback.

- Q. Can you tell me why you selected Europress?**  
 A. Ease and speed of installation and availability of product.
- Q. What else did you find beneficial about Europress once you started using it?**  
 A. The availability of CAD models allowed us to accurately design the system in a way that made us confident proceeding to installation. Installation was straight forward and quick, the Europress range of products allowed us to easily adapt to threaded and flanged applications where needed.

- Q. What applications did you use Europress for?**  
 A. We have used Europress for multiple compressed air/gas system installs, including stainless steel for a food grade nitrogen generation plant in Australia, and zinc-coated carbon steel for a shop compressed air distribution system in New Zealand.
- Q. What were Waterworks like to work with?**  
 A. Very helpful, staff were willing to meet and show us around the warehouse to visualise and try out product. Lots of stock on hand meaning we did not have to wait for product to come in. Availability of CAD models and price lists allowing us to design and price our installations, before confirming and ordering.

Thank you for the feedback Liam, we really enjoyed working with EHL Group and look forward to our next project together.
